

DATE: March 7, 2014

FROM: Aaron Ridenour, Manager of Marketing
Prairie Power, Inc.

TO: Federal Communications Commission (FCC) Staff

SUBJECT: Expression of Interest- Rural Trials
Docket No. 10-90

Background

Prairie Power, Inc. (PPI) is a member-owned, not-for-profit electric generation and transmission cooperative, which produces and supplies wholesale electricity to 10 electric distribution cooperatives in central Illinois. PPI's distribution cooperatives provide retail electric service to approximately 87,400 consumers within their local service territories. PPI is one of more than 60 generation and transmission (G&T) cooperatives that supply wholesale electricity to rural utilities in the United States.

PPI owns and operates approximately 580 miles of transmission lines at 138 kV, 69 kV and 34.5 kV; 141 MW of oil and gas-fired peaking units; and 78 distribution and transmission substations to serve its members. PPI is also one of nine public utility partners in the Prairie State Generating Company (PSGC), a limited liability corporation responsible for the ownership, construction and operation of the Prairie State Energy Campus (PSEC). The PSEC is a two unit, 1600 megawatt supercritical electric generation station that came on line in 2012. PPI owns an 8.22% share of the output of the two units at PSEC, providing 130MWs of low cost, clean coal generation to PPI and its members.

In September of 2011, PPI completed a Telecommunications Network Study which recommended the installation of a Fiber Wide Area Network (WAN). The WAN proposed consisted of two networks; an Operational network for SCADA communications between PPI transmission substations, PPI Dispatch Center and Member SCADA systems and a Business network between PPI's main office and Member offices.

In November of 2011, PPI executed a Memorandum of Understanding (MOU) with Adams Telephone Cooperative, Mid Century Telephone Cooperative, and McDonough Telephone Cooperative for the development of the Prairie Fiber Consortium (PFC). The PFC was to explore the use of existing and future fiber optic facilities of the Founding Members in a coordinated manner to deploy a fiber-optic cable network in the region.

In December of 2012, a Prairie Power Consortium Reciprocal Use and Operating Agreement (Agreement) was executed by the Founding Members and Cass Cable TV and Cass Telephone for the development of a fiber WAN for use by PPI in its proposed WAN and other Participants in the deployment of broadband access in underserved areas. In September 2013, Conxxus was approved as an additional Participant to the agreement. The Agreement provides for Indefeasible Rights of Use (IRU) to PPI for 4 strands of fiber or 4 wavelengths on existing and future fiber assets of the other Participants as a defined pricings structure as well as IRU's for the other

Participants to 4 strands of fiber or 4 wavelengths on existing and future fiber assets of PPI. The IRU terms are 20 years.

The total PPI fiber WAN is approximately 1200 miles in length. Of these 1200 miles, PPI will own 165 miles of fiber, PPI will use 515 miles of Participant fiber and PPI will lease 520 miles of fiber from other providers. The total estimated Capital cost of the PPI Fiber WAN is approximately \$10 million using the PPI Fiber Project Consortium. Additional dark fibers for FTTH are estimated to add \$2 million to the cost of the PPI Fiber WAN. The estimated capital cost of the PPI Fiber WAN based on PPI installing all fiber was in excess of \$25 million.

PPI and the members of the PFC see rural broadband being extremely beneficial and necessary for continued Economic Development success as well as essential for schools, hospitals, rural health care centers, libraries, government and existing businesses.

Geographic Territory

PPI's distribution cooperative members (see table) serve 87,400 retail customers in service areas of over 15,400 square miles across central Illinois. Population density averages 5.1 premises per square mile. The map below shows PPI's service area superimposed on a map of FCC Experiment Eligible Locations. The service area covers all or part of 148 census tracts, which are listed in Appendix A including the number of high cost and extremely high cost locations as defined by the FCC Connect America Model (CAM) at the Funding Threshold of \$52. The total number of eligible locations defined as high cost is 34,217, or approximately 44% of PPI's total retail customers. 8,750 extremely high cost locations comprise an addition 11%, thus 55% of locations within PPI's service area are defined as unserved or underserved (i.e. eligible) and have a high or very high funding threshold.

Table 1 PPI Distribution Cooperative Members

Cooperative	Central Office City	Number of Meters Served	Consumers per Mile of Line
Adams Electric Cooperative	Camp Point	8,593	3.86
Coles-Moultrie Cooperative	Mattoon	9,528	4.78
Eastern Illini Electric Cooperative	Paxton	13,686	3.03
Illinois Rural Electric Cooperative	Winchester	10,413	3.55
Jo-Carroll Energy Cooperative	Elizabeth	19,912	8.15
McDonough Power Cooperative	Macomb	5,181	3.70
Menard Electric Cooperative	Petersburg	10,555	4.08
Shelby Electric Cooperative	Shelbyville	9,962	4.55
Spoon River Electric Cooperative	Canton	4,892	3.90
Western Illinois Electric Cooperative	Carthage	3,680	3.00

Figure 1 PPI Southern Service Area & FCC Eligible Locations

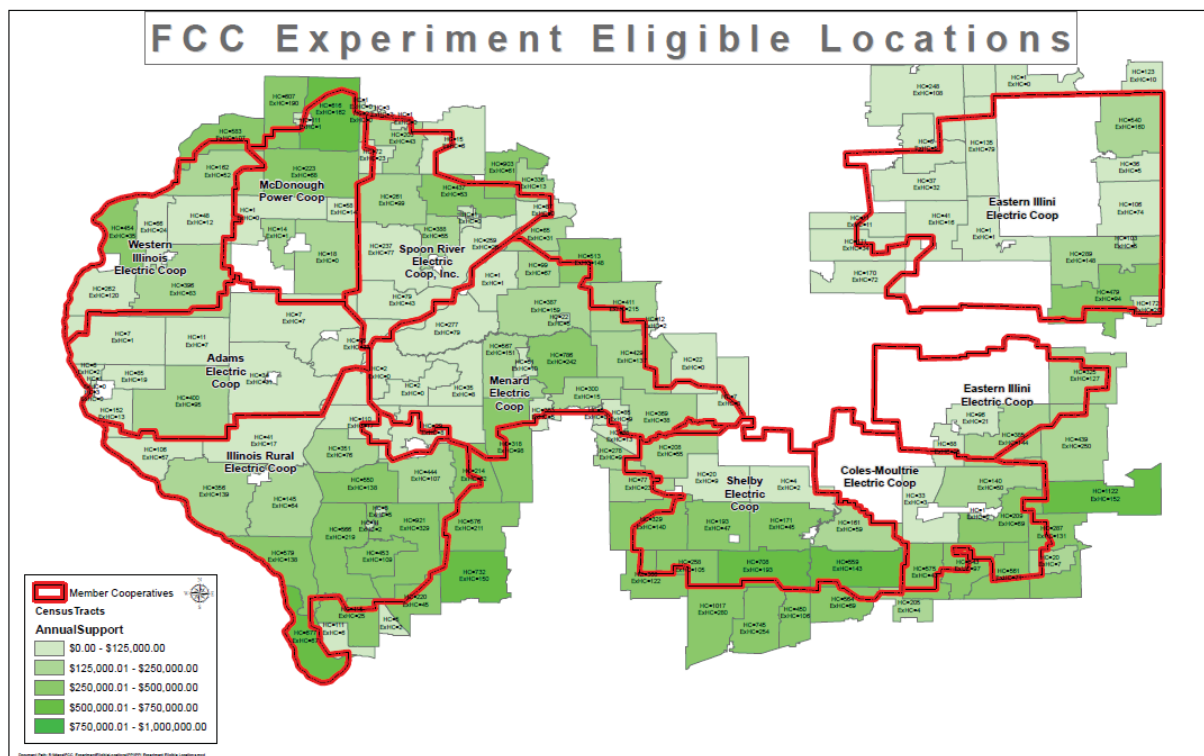

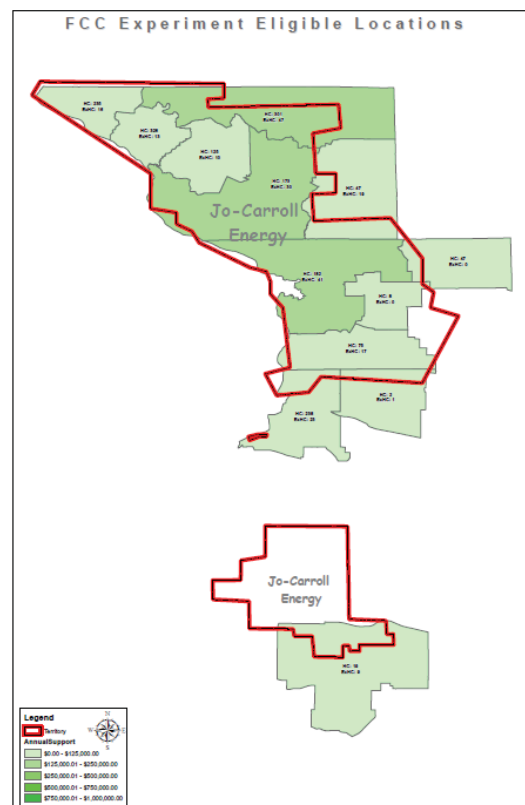

Figure 2 PPI Northern Service Area & FCC Eligible Locations

List of Anchor Institutions

List of potential anchor institutions are provided in Appendix B (Primary and Secondary Schools) and Appendix C (Libraries). Additionally, hospital and post-secondary schools will be anchor institutions.

Proposed Technology

PPI is planning to support Fiber to the Home (FTTH) services offered by its distribution member cooperatives and consortium members (“retail providers”). Offerings will include voice, television, and broadband services. Initial speeds of broadband will vary by retail provider, but are expected to start at 10 Mbps and offer up to gigabit services for anchor institutions. Service offering pricing will be set by PPI’s retail provider partners and are expected to be very competitive and comparable to services offered by rural electric cooperatives with existing FTTH services.

State and/or Local Participation in and Support for Project

PPI is not receiving state or local funding for the Fiber WAN project. PPI is working with Illinois Century Network (ICN) to leverage the existing the ICN fiber network through a long-term dark fiber lease (indefeasible right of use, or IRU) at standard ICN rates.

Existing Providers

There are a number of existing providers, please see the list in Appendix C for wireline and wireless providers. Some of the existing providers are PPI member electric distribution cooperatives that have been providing internet service to their rural member base, but service has been limited by the slow WAN networks available to them today (e.g. maximum internet sink of 20 Mbps). Some of the existing providers are members of the consortium described above and have built significant fiber networks. The Fiber WAN project enables these providers to geographically expand their broadband offerings to high cost eligible locations. Many areas, as identified by the FCC as eligible locations, are completely unserved or only a small percentage of the census blocks are served in areas of higher density as served by existing providers.

Project Timeline

PPI's Fiber WAN project is shovel ready, design work has been completed. PPI plans to reach all member cooperatives central offices (COs) by year end 2014 and complete redundant connections in 2015. PPI's project timeline also enables PPI distribution cooperatives and consortium members to be shovel ready for their FTTH projects in 2014.

Scalability

PPI's Fiber WAN network is designed for the both the scalability and availability required to support broadband efforts throughout its service area. For new builds, fiber capacity is designed to provide physically diverse dark fiber strands to PPI distribution cooperatives COs and will support multiple internet sink locations. Network equipment is planned to provide 2.5 to 10 Gbps bandwidth on the WAN and higher speed SFP and/or additional dark fiber strands or dark wavelengths are available as bandwidth requirements increase. Anchor institutions support can be 100 Mbps to 1 Gbps as required by PPI electric distribution cooperatives and consortium members.

Total Utility Investment

PPI alone will invest \$6 million.

One Time Capital Infrastructure Investment Needed

PPI is asking for a one-time \$6 million investment.

Total Project Cost

The capital expense to build the high speed transport network to support PPI's electric distribution cooperatives and consortium partners FTTH build out is \$12 million.

Appendix A – List of Census Tracts with FCC Eligible High Cost Locations
